Statistical Divisions of South Australia

For the purpose of presenting official statistics for the State, South Australia has been divided into seven statistical divisions. These divisions consist, for the most part, of aggregations of local government areas or statistical local areas and are designed to be homogeneous regions characterised by identifiable social and economic links.

The local government areas shown in this publication are arranged alphabetically within each statistical division. An index of these areas is included at the back of this publication.

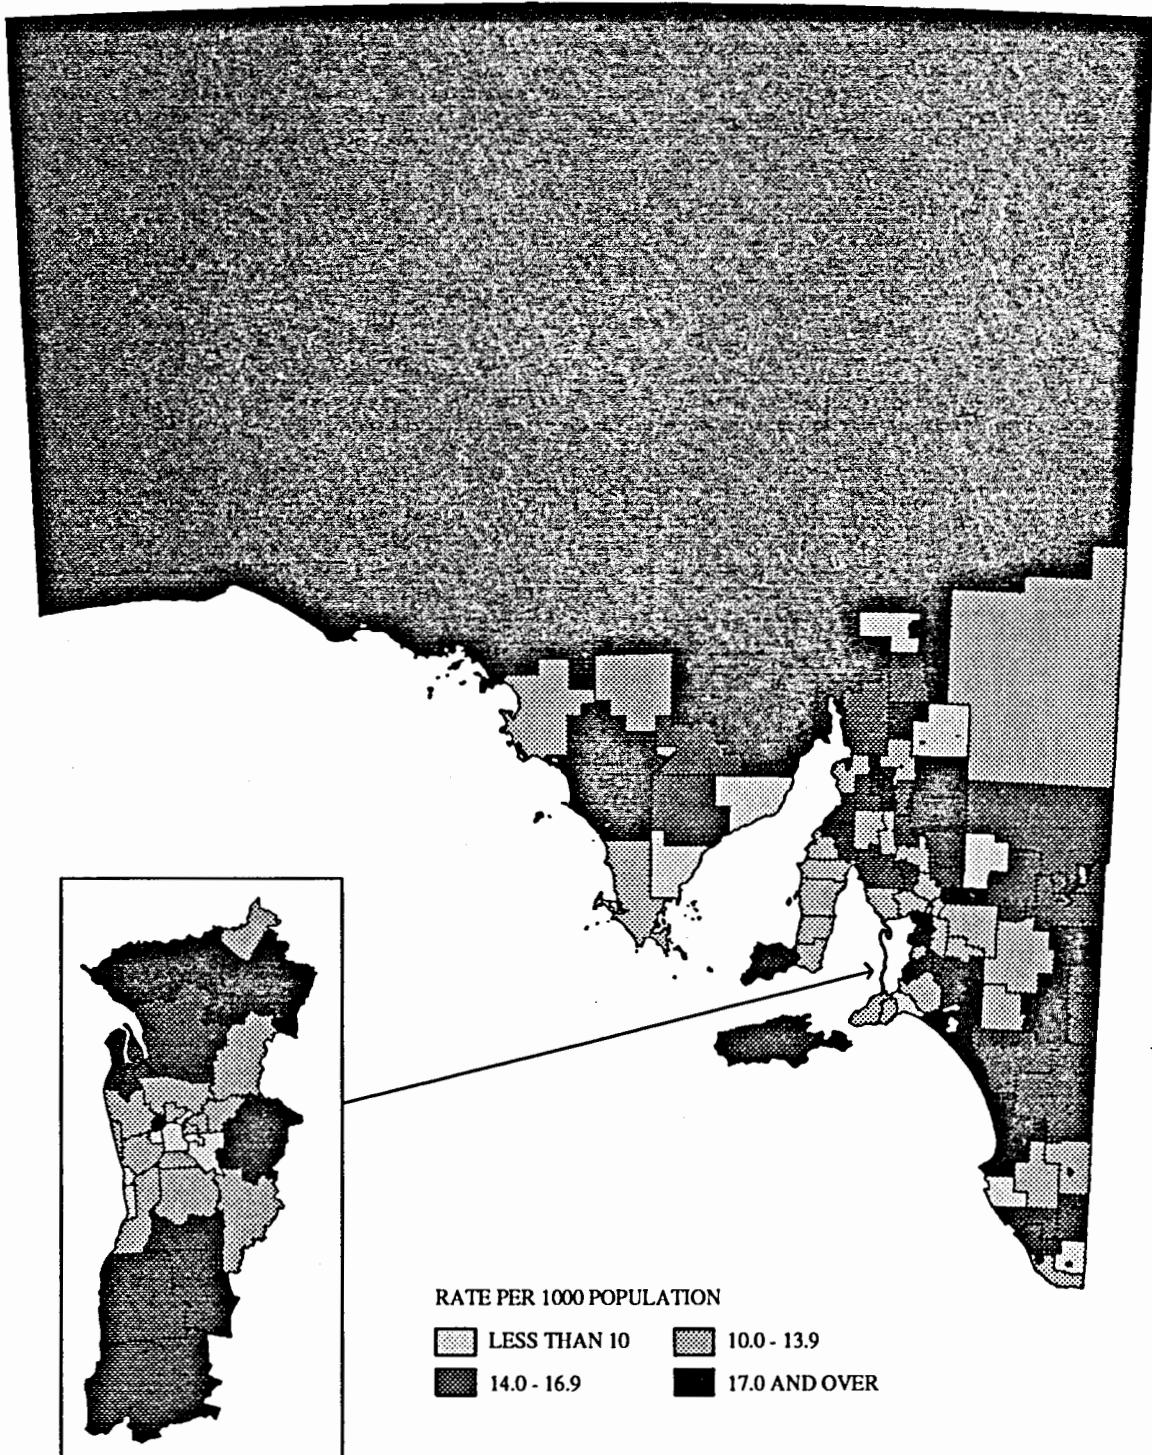

A map of each division showing principal towns followed by a geographic commentary and an economic summary of the data introduces each statistical division.

The data contained in this publication represent only a selection of the full range of statistics available from the ABS.

Adelaide Statistical Division

The Adelaide Statistical Division (ASD) embraces the centre of population, secondary industry and commerce of the State. It is bounded on the west by the sea, the north by the Gawler River and the east and south by the Mount Lofty Ranges.

Rainfall varies with annual falls of 400–510mm on the plains to the north and west of the city and along the southern coastal fringe. Recordings are generally between 530 and 690mm in the foothills, increasing to a maximum of approximately 1200mm at Stirling in the highest part of the Mount Lofty Ranges.

Rural activity is largely confined to the outer areas of this Division with emphasis on products consumed by the city dweller *e.g.* milk, vegetables and fruit; areas of vineyards are to the south and in the Adelaide Hills and Plains areas. The average size of a holding was 54 hectares in 1991–92.

In 1988–89, almost 80 per cent of the State's manufacturing industry was concentrated in the ASD with a turnover of \$10,069 million and employment of 84,032 people.

Approximately one-third of tourist accommodation establishments are located in this Division, mainly in the City of Adelaide and Glenelg. More than one-quarter of occupied private dwellings are rented.

Adelaide Statistical Division contains 0.2% of the total area of the State, but had 73.1% of the population in 1991 and in comparison with other statistical divisions in South Australia it had:

- the highest proportion of persons who have never been married (28.9%);
- the lowest proportion of persons born in Australia (72.2%);
- the lowest proportion of married persons (55.4%);
- the lowest birth rate (13.1%);
- the lowest proportion of persons under 15 years of age (19.6%); and
- the lowest ratio of males to females in South Australia (96:100).

NFORMATION SERVICE

The Information Service can supply statistical information in a variety of ways: over the counter, by telephone, by correspondence, by facsimile, by photocopying printed material, or by subscription.

Telephone inquiries operate through a telephone queuing system.

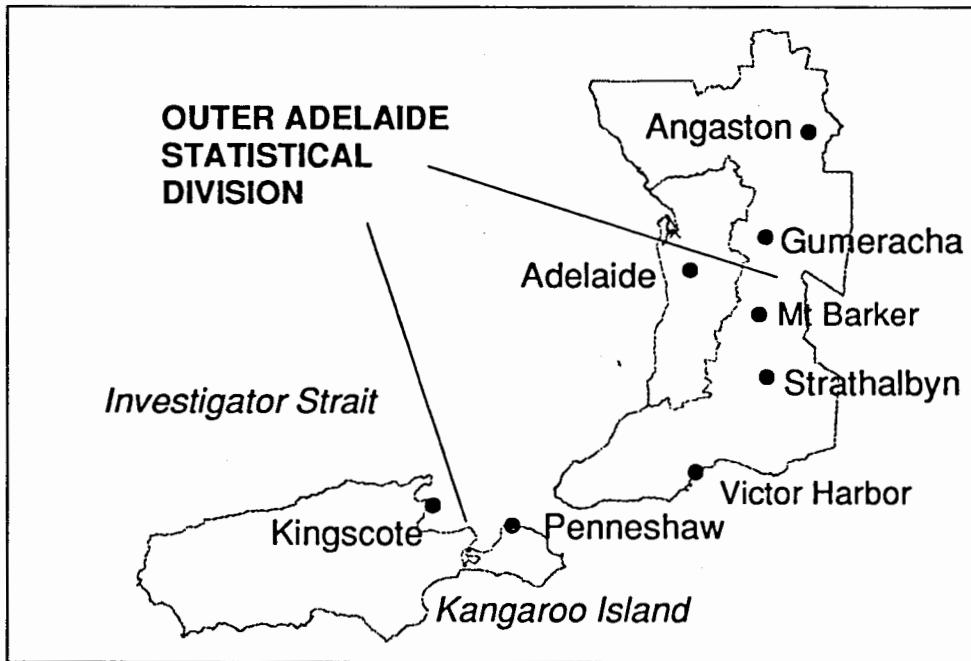

NFORMATION CONSULTANCY

The Information Consultancy Service provides personalised assistance to meet more complex information needs. ABS consultants have access to all statistical information within the Bureau, including detailed information which may not be included in regular publications. Specialised needs can be met by tailored compilations. The information can be provided in various formats including computer disk, hardcopy reports or a simple telephone call.

*For more information contact the Information Service on (08) 237 7100

Outer Adelaide Statistical Division

This Division extends east from Gulf St Vincent, an area north of the Adelaide Plains, to the Barossa Valley and the northern Mount Lofty Ranges. It continues southwards past Adelaide as the Mount Lofty Ranges (and eastern extremities) to the hills and plains of the Fleurieu Peninsula. Kangaroo Island is included also in this Division.

Average rainfall varies from 300mm on its coast to higher falls of 660 to 1020mm for the Mount Lofty Ranges while average rainfall is 460 to 760mm for Kangaroo Island.

The main economic activities are viticulture and wine production in the Barossa Valley; dairying, horticulture and grazing in the Mount Lofty Ranges; dairying, meat and wool production and cereal cropping on the Fleurieu Peninsula; meat and wool production, cereal cropping and fishing on Kangaroo Island. Milk cattle accounted for 41.6% of the State total, while pigs in this Division made up 28.6% of the State pig herd in 1991-92.

Kangaroo Island's western end is one of Australia's largest fauna and flora reserves.

Outer Adelaide was the second most populous Division with 93,200 people in 1991, 6.4% of the State population.

The population increased by 13.8% between 1986 and 1991, three times the rate of increase for the rest of the State.

In comparison with other statistical divisions, Outer Adelaide contained the highest proportion of homes being purchased (30.4%), and the lowest proportion of homes being rented (18.0%) at the 1991 Census.

The median monthly mortgage, and the median weekly rental were similar to the Adelaide Statistical Division and higher than other statistical divisions.

Yorke And Lower North Statistical Division

This Division embraces Yorke Peninsula and a small area north to Port Broughton, the region bounded by the Eudunda Range, associated plains to the east, and the fertile areas of Clare-Watervale.

Average rainfall for the Yorke Peninsula is between 300 and 510mm while in the remainder it varies from 300mm near Gulf St Vincent to 660mm around Clare-Watervale.

Principal rural activities are cereal, wool and prime lamb production with some cattle and pigs on Yorke Peninsula. Wheat and sheep production predominate for the rest of the Division except for Clare-Watervale which is an important viticultural and wine producing region.

The Division of Yorke and Lower North, although of growing popularity for retirees, contains only 3% (43,881 persons) of the State population.

In 1991-92 it supported 14.9% of rural establishments in South Australia with the average size of establishments being 800 hectares.

Yorke and Lower North was the smallest division in terms of manufacturing, with only 74 establishments in 1988-89.

More than 27% of people were employed in agriculture and fishing in 1991 (the highest proportion of all statistical divisions), the next largest industries being community service (15.1%) and wholesale and retail trade (15.0%).

In 1991 this Division had the lowest proportion of persons who have never been married (19.5%) and the highest proportion of persons aged 65 years and over (17.0%).

Over half (55.3%) of the households own their own home.

The death rate, at 10.4 per 1,000 estimated resident population, is higher than other statistical divisions in South Australia.

OUTH AUSTRALIAN YEAR BOOK

This is the best single reference for business people, students and families. It is the State's encyclopaedia – an essential book for anyone interested in the facts about South Australian people, development and potential. A glance demonstrates its value in your home or office, gift for an important business contact, or for overseas relatives and friends.

Nowhere else in a single volume will you find such detailed information:

- Land and natural resources – area, climate, agriculture, minerals, forests and mining.*
- Human resources – population, employment, births, deaths, marriages, occupations.*
- Human activities – housing, education, social services, recreation, government systems.*
- Transport – railways, bus services, taxi-cabs, motor vehicles.*

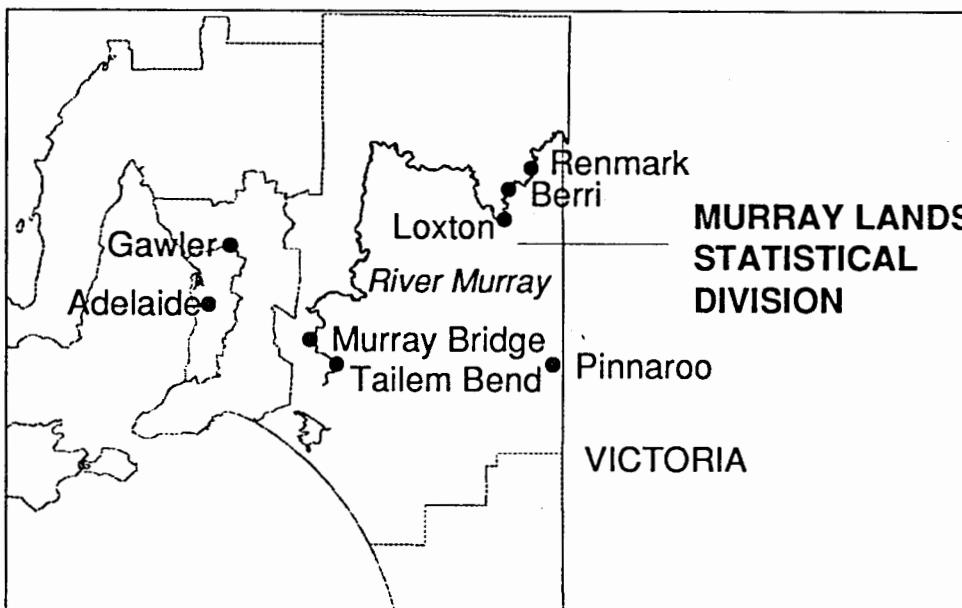

Many tables, graphs and maps support over 300 pages of facts and figures about our State. Includes a comprehensive subject index and a brief history of South Australian major events. The 1993 edition features a regional profile of Yorke Peninsula.

Where to obtain your copy:

Buy the 1993 edition from the Adelaide Office of the ABS, 55 Currie Street, Adelaide.

Contact the ABS Bookshop on (08) 237 7582, Fax (08) 237 7366.

Murray Lands Statistical Division

Murray Lands extends westward from the South Australia-Victoria border to the Eudunda Range and 60 kilometres north of the upper reaches of the River Murray in the east with mallee country directly south of the River. The Murray Mallee region is bounded by the lower reaches of the River, the Coorong to the south-west and the Ninety Mile Desert to the south-east. Average rainfall varies from 200 to 480mm in the north to between 250 and 430mm in the south.

Along the Murray there are extensive irrigated citrus and stone fruit orchards and viticulture associated with fruit canning and packing and wine and brandy production. North-west of the river is sheep farming while south of the river cereals are grown. In the Murray Mallee are dairy cattle concentrated on the lower reaches of the river and its reclaimed flats. Cereal crops are grown mainly on the western side of the river with sheep grazing on the east. Barley is grown near the South Australia-Victoria border. Secondary industry is milk processing, butter manufacturing, flour milling and some production of agricultural implements.

The Statistical Division of Murray Lands covers 4.8% of the State, and had a population of 67,443 persons, or 4.7% of the State total.

The birthrate of 15.0 is slightly higher than average, while the death rate of 7.6 is just below average. The percentage aged 65 years and over is marginally lower than average, and those aged less than 15 years is 23.2%, 2.5 percentage points above the South Australian average.

In 1991-92 this Division contained 24.7% of the State's rural establishments and 30.2% of the milk cattle herd. Orchards were predominant in the irrigated areas.

In 1991-92 the average size of agricultural holdings was 1,037 hectares, with an average gross value of agricultural commodities of \$139 per hectare. The agriculture industry accounted for 25.5% of all employed persons in 1991.

DELAIDE, A SOCIAL ATLAS (2840.4)

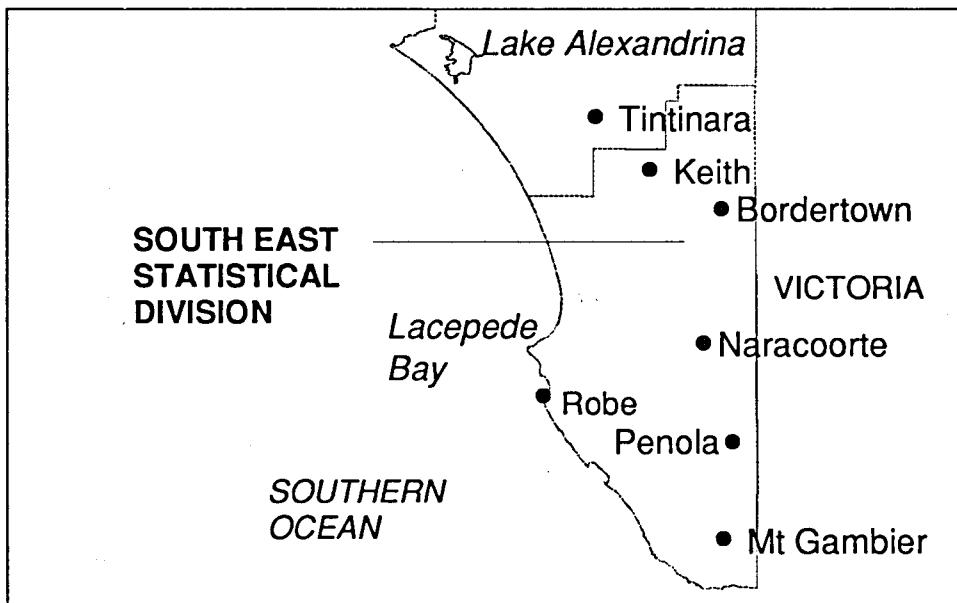

A pictorial presentation of the 1991 Census in 46 maps showing various characteristics of the population of Adelaide. Includes population, ethnicity, education, families, income, labour force and dwellings.

The Atlas is an essential resource for anyone wishing to understand the spatial distribution of the population of Adelaide. The Atlas divides the metropolitan area up into over 1,700 areas, making it possible to determine the make-up of the population and how it compares with other areas.

Commentaries summarising the features of each map assist you to interpret the maps and effectively use the information presented.

*Available for \$45.00, contact the ABS Bookshop on (08) 237 7582,
Fax (08) 237 7366.*

South East Statistical Division

This Division comprises the south-eastern corner of the State between the coast and the South Australia-Victoria border with the northern boundary being near Keith.

Rainfall varies from 400 to 510mm in the north to 610 to 790mm in the south. The area has virtually no natural drainage and this has led to extensive artificial drainage to lower the water table in order to permit agriculture.

Rural activities include sheep grazing and cereal cropping in the drier north. The wetter and more fertile south has sown pasture with grazing for fat lambs, beef, dairying and dairy products industries. The sawmills, paper and by-products factories of the south use softwood from the extensive *pinus radiata* forests of the area. Viticulture and production of wines are features of the Coonawarra and Padthaway regions. In the coastal waters southern rock lobster is caught.

In 1991-92 the number of rural establishments in this Division was 16.6% of the State total. It had the greatest number of beef cattle (50.6%), sheep (27.6%) and lambs (25.0%), but the gross value of its agricultural commodities showed a return of only \$195 per hectare, compared with \$225 per hectare for Yorke and Lower North, and \$2,352 for Adelaide.

The South East covers 2.2% of the land and supports 4.3% of the population in South Australia. It had an estimated resident population of 62,855 in 1991 which had remained static since 1986.

The Division had a birth rate of 14.3 in 1991 and a death rate of 6.9 which was well below the South Australian rate of 7.7.

In 1991 the population had a relatively low proportion of persons aged 65 years and over (11.1%) and a relatively high proportion of persons aged under 15 (24.6%).

At the time of the 1991 Census, the Division had the highest participation and the lowest unemployment rates in South Australia, with 79.5% of males and 55.9% of females being in the workforce, and an unemployment rate of 10.6%.

AUSTRALIA'S ENVIRONMENT, ISSUES AND FACTS (4140.0)

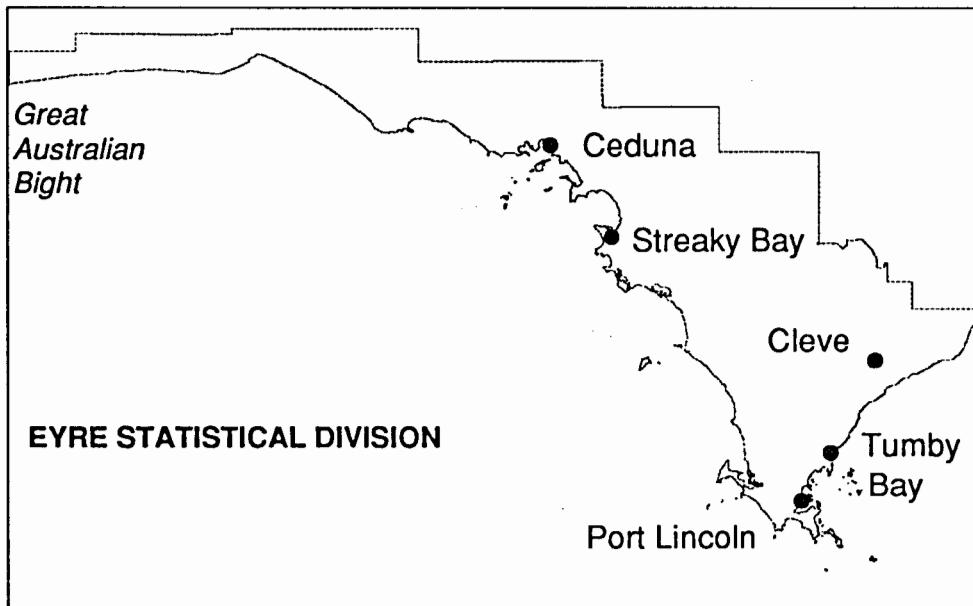

Contains a compilation of socio-economic and environmental data including human settlement, flora, fauna, water, land and atmosphere. Includes information on:

- endangered species of flora and fauna
- agricultural land use and production
- water use and quality
- forest resources
- air quality
- transport and mining

A comprehensive reference for those studying or with an interest in the environment.

*Available for \$35.00, contact the ABS Bookshop on (08) 237 7582,
Fax (08) 237 7366.*

Eyre Statistical Division

This Division covers Eyre Peninsula from the coastal region of the Far West to the Gawler Ranges in the north.

Rainfall averages between 280 and 610mm for Eyre Peninsula while the West Coast varies from 400mm east of Ceduna to less than 200mm in the Far West.

Cereal crops dominate this Division with 1,025,000 hectares sown in 1991-92, while sheep are raised for wool and prime lamb markets. Fishing is a major industry (tuna being the most important catch). Port Lincoln provides bulk handling facilities, a large abattoir for export lambs and a fish cannery.

The average gross value of agricultural commodities in 1991-92 was \$77 per hectare, to properties with an average size of 2,766 hectares. This land also held 15.9% of the sheep flock and 17.0% of the lambs in this State.

At the 1991 Census the population was 33,165 persons, with a higher ratio (107:100) of males to females than any other Division. At the 1991 Census the population had fallen by 5.1% from 1986, but this Division had the highest proportion of children under 15 years (24.9%) and the lowest of persons born overseas (9.4%).

In 1988-89 Port Lincoln had 59.1% of the manufacturing establishments, 89.2% of turnover (\$109 million) and paid 88.9% of wages and salaries for the Division.

In 1991 Eyre had the highest unemployment rate (13.5%) of all statistical divisions.

TRIKING A BALANCE! (1314.0)

This resource book contains chapters on environment and settlement, population, economic environment, and environmental statistics (including land use, forests, biological diversity, water, various pollutants, and recycling and waste disposal). Includes appendixes on the Murray-Darling Basin and various environmental issues for Australia's neighbours in the South Pacific, South East Asia, Southern Africa and Antarctica.

An ideal text book on these issues for students.

*Available for \$24.50, contact the ABS Bookshop on (08) 237 7582,
Fax (08) 237 7366.*

Northern Statistical Division

The Northern Statistical Division is the largest in the State, covering the width of the State from Western Australia to New South Wales, north to the border with the Northern Territory and south to Whyalla and Port Pirie.

Areas in the Far North receive less than 200mm of rain per annum with some being without rain for long periods. In the Flinders Ranges, rainfall varies from 400mm to 150mm at Marree. Whyalla has less than 300mm while east from Port Pirie to the New South Wales border it varies from 500mm to 150mm.

Natural gas is piped to Adelaide, Port Pirie and Whyalla from Moomba in the north-east of the State. Extensive opal fields are at Coober Pedy and Andamooka, while copper, uranium, gold and silver are mined from Olympic Dam. Whyalla is supplied with iron ore from the neighbouring Middleback Ranges. Port Bonython petrochemical plant receives stabilised crude oil and separated gas liquids from the Cooper Basin oilfields. At Port Pirie, the world's largest zinc smelter treats lead, silver and zinc ores from Broken Hill (NSW). Leigh Creek sub-bituminous coal is mined by the open-cut method and used at Port Augusta to generate electricity. Rural activities are sheep and cattle grazing.

Rural establishments support over two million sheep and more than half a million lambs and in 1991–92 the holdings had an average area of 33,330 hectares, with a gross value of agricultural commodities of \$5 per hectare.

In 1988–89 there were 96 manufacturing plants, 58 being in the 'Iron Triangle' which encompasses the towns of Whyalla, Port Augusta and Port Pirie. A turnover of \$1,166 million made the Northern Division second only to Adelaide in terms of value of manufacturing output. The average employment per establishment was 71.4 persons, compared with Adelaide (30.7), the next largest.

Northern Statistical Division had a population of 88,594 at the 1991 Census (6.1% of the State total) on an area which covers 82.4% of South Australia.

In 1991 Northern had the highest birth rate (17.6) of all the statistical divisions, and shared the lowest death rate (6.9) with the South East. Only 9.3% were aged 65 years and over (the lowest proportion of elderly in the State), while 24.5% were aged less than 15 years. At the 1991 Census Northern had:

- the highest proportion of Aboriginal and Torres Strait Islander persons (6.0%);
- the lowest proportion of homes owned or being purchased (50.2%); and
- the highest proportion of rented homes (43.3%).

Truro	1 Oct. 1991	Amalgamated with Ridley (DC) to form Ridley-Truro (DC)	-850

(a) At date of effect.

CHANGE IN STATISTICAL SUBDIVISION BOUNDARY

The boundary between the Riverland and Murray Mallee Statistical Subdivisions has been adjusted because of the amalgamation of Ridley (DC) and Truro (DC). The new SLA of Ridley-Truro (DC) is in the Murray Mallee Statistical Subdivision. Truro (DC) was formerly in the Riverland Statistical Subdivision.

C AUSSTATS

On-line Access to Time Series Data

PC AUSSTATS will let you access the information you need 24 hours a day, 7 days a week.

PC AUSSTATS is compatible with most spreadsheet packages and is ready for instant analysis and manipulation on your PC.

PC AUSSTATS is updated daily and gives on-line access to over 85,000 time series (economic and social) items. Historical information is available for a 15 year period.

For more information contact our Information Service on (08) 237 7100.

EXPLANATORY NOTES

Introduction

This issue of Local Government Area Statistics is the tenth of a series (previously entitled *Divisional Statistics*), and is designed to provide users with a range of statistical information about geographic areas and regions of South Australia.

Geographic areas

2. The areas used in this publication conform to the classification of spatial units set out in the *Australian Standard Geographical Classification, Edition 2.1* (1216.0).

3. *Statistical Divisions* are designed to be relatively homogeneous regions characterised by identifiable social and economic links between the inhabitants and between the economic units within the region, under the unifying influence of one or more major towns or cities. Capital city divisions are predominantly urban in character and the boundaries are delineated to contain the anticipated urban development of the capital cities (and associated urban centres) for a period of at least twenty years.

4. *Statistical Local Areas* (SLAs) are geographical areas which, in almost all cases, are identical with whole legal local government areas (LGAs). In other cases they represent areas which are unincorporated. In aggregate, SLAs cover the whole of the State without gaps or overlaps.

5. Amalgamations or boundary changes between legal local government areas which have occurred since 1 July 1986 are shown on pages 67-69.

Estimated resident population

6. The *estimated resident population* (ERP) is the official ABS estimate of the Australian population. The ERP is based on results of the population census and is compiled for census dates and updated for post-census dates. Intercensal estimates of the resident population are revised each time a population census is taken.

7. The ERP at census date is arrived at by:

- (a) adjusting the census counts (actual location basis) to obtain counts on the basis of usual residence (census counts, place of usual residence);
- (b) adjusting the census counts, place of usual residence, for census under-enumeration; and
- (c) adding to the adjusted census counts, place of usual residence, the number of South Australian residents estimated to have been temporarily overseas at the time of the census.

8. Intercensal estimates are made by adding to the South Australian estimated resident population at census date the following components:

- (a) natural increase (on a usual residence basis);
- (b) net permanent and long-term overseas migration; and
- (c) net interstate migration involving a change of usual residence.

9. For each SLA the estimated resident population at census date is updated annually by taking into consideration indicators of population change such as building activity, family allowance payments, licensed drivers, Medicare enrolments and births and deaths. Estimates for SLAs produced from these indicators are adjusted to add to the independently produced State estimate.

10. *Sex ratio* is the number of males per 100 females.

11. The *birth rate* is the number of registered live births to mothers usually resident in an area per 1,000 of the mid-year estimated resident population.

12. The *death rate* is the number of registered deaths of persons usually resident in an area per 1,000 of the mid-year estimated resident population.

Census of Population and Housing

13. The 1991 Census data included in this publication are a count of where people actually were on Census night, which may not have been where they usually lived.

14. All information collected in the Census is confidential. In statistical tables, to protect the confidentiality of information about individual persons or families, automatic adjustments are made to some tables. For this reason the sum of the components of a table will not always equal the total of the table nor will the totals of similar tables be the same. The automatic adjustments have a greater impact on cells with a small value and as a consequence no reliance should be placed on cells with a value of 5 or less. For further information contact the Census Liaison Officer on (08) 237 7414.

15. *Aboriginal or Torres Strait Islander* classification is based on self-identification.

16. *Tertiary students* includes students at TAFE colleges.

17. A *household* is a group of people who usually reside and eat together and are classified as a family, a group, a lone person household or a household containing visitors only. A household resides in a private dwelling and includes caravans etc.

18. A *family* includes a one-parent family, couples, a two-parent family and a family of related individuals in which at least one person is aged 15 years or more. This

publication does not provide data about couple families with no offspring.

19. *Household income* is the sum of the personal incomes of each resident present in the household aged 15 years or more (excluding visitors).

20. *Nature of occupancy* indicates whether households are renting, purchasing or own the dwelling in which they were on census night. These data exclude caravans etc. in caravan parks.

21. The *median value* is that value that divides the relevant population into two equal parts, half falling below this value and half exceeding it.

22. *Monthly mortgage payment* records the housing loan repayment being paid by a household to purchase the dwelling in which they were enumerated.

23. *Weekly rental payment* records the amount of rent paid by households on a weekly basis for the dwelling in which they were enumerated.

24. *Labour force* for 1991 Census purposes included people aged 15 years and over who:

- (i) worked for payment or profit, or as an unpaid helper in a family business, during the week before census night;
- (ii) had a job from which they were on leave or otherwise temporarily absent;
- (iii) were on strike or stood down temporarily; and
- (iv) did not have a job but, were actively looking for work.

Categories (i) to (iii) are classified as employed while category (iv) are unemployed.

25. *Not in the labour force* included people who were retired, pensioners, and people solely engaged in home duties.

26. The *labour force participation rate* is the percentage of all persons aged 15 years and over who were in the labour force.

27. The *unemployment rate* is the number of unemployed persons expressed as a percentage of the labour force.

28. The labour force figures from the Census are likely to differ from the ABS labour force survey estimates because of methodological differences.

Building Approvals

29. Statistics of building work approved are compiled from:

- (a) permits issued by local authorities in areas subject to building control by those authorities; and
- (b) contracts let or day labour work authorised by Commonwealth, State, semi-government and local government authorities.

30. Major building activity which takes place in areas not subject to the normal administrative approval processes (e.g. buildings on remote mine sites) is also included.

31. A *building* is defined as a rigid, fixed and permanent structure which has a roof. Its intended purpose is primarily to house people, plant, machinery, vehicles, goods or livestock. An integral feature of a building's design, to satisfy its intended use, is the provision for regular access by persons.

32. A *dwelling unit* is defined as a self-contained suite of rooms including cooking and bathing facilities, and intended for long-term residential use. Units (whether self-contained or not) within buildings offering institutional care such as hospitals, or temporary accommodation such as motels, hostels and holiday apartments, are not defined as dwelling units. The value of units of this type is included in the appropriate category of non-residential buildings approved.

33. A *residential building* is defined as a building predominantly consisting of one or more dwelling units. Residential buildings can be either houses or other residential buildings.

(a) A *house* is defined as a detached building predominantly used for long term residential purposes and consisting of only one dwelling unit. Thus detached granny flats and detached dwelling units such as caretakers residences associated with non-residential buildings are defined as houses for the purpose of these statistics.

(b) An *other residential building* is defined as a building which is predominantly used for long-term residential purposes and which contains (or has attached to it) more than one dwelling unit (e.g. includes townhouses, duplexes, apartment buildings etc.).

34. The number of dwelling units created by alterations and additions to existing buildings and through the construction of new non-residential buildings is not included in the figures.

35. Values data are derived by aggregation of the estimated value (when completed) of building work (excluding value of land and landscaping but including site preparation) as reported on approval documents. For 'houses' these estimates are usually a reliable indicator of the completed value of the building. However, for 'other residential buildings' and 'non-residential buildings' these estimates can differ significantly from the completed value of the building.

Agricultural activity

36. Statistics have been derived from the annual Integrated Agricultural Commodity Census conducted at 31 March each year.

37. A *rural establishment* comprises agricultural activity from a single physical location. This can comprise non-contiguous lands provided that they are under the same management, function as a single unit and are within the same statistical local area or county. Data are

attributed to the district in which the main establishment is situated. In other circumstances, where the same management operates more than one location, each location is treated as a separate establishment.

38. The ABS excludes those establishments undertaking agricultural activity which have an estimated value of agricultural operations of less than \$22,500.

39. *Area of crops* includes the total area of land sown or planted to crops irrespective of whether the area was subsequently harvested or the crop failed. Where two successive crops are grown on the same land during the one season, that land is included twice in the area of crops. Crops include cereals, legumes, oilseeds, green forage, fruit, grapes and vegetables but excludes pastures.

40. *Cattle* are classified according to the two main purposes, i.e. meat production and milk production, irrespective of breed.

41. *Gross value of agricultural commodities produced* is the value placed on recorded production at the wholesale prices realised in the market place (in general, the market place is the metropolitan market). This value is then apportioned to the statistical local areas in the State according to the quantity of that commodity produced in the area. In cases where commodities are consumed locally, or where they become raw material for a secondary industry, these points are presumed to be the market place.

Manufacturing

42. The *manufacturing census* is an annual collection. A full-scale census is conducted triennially, with small-scale censuses being conducted in each of the intervening years. For small-scale censuses, businesses provide data on employment, wages and salaries paid and turnover. For full-scale censuses additional data are requested.

43. A *manufacturing establishment* is one predominantly engaged in manufacturing activities, but the data collected generally cover all activities of the establishment. In general an establishment covers all operations at one physical location but may consist of a group of locations provided they are within the same State. Includes establishments employing fewer than four persons.

44. *Average employment over whole year* is the average number of working proprietors and employees on the payroll.

45. *Wages and salaries paid* are the gross wages and salaries of all employees of the establishment. The drawings of working proprietors are excluded.

46. *Turnover. Sales* (exclusive of excise and sales tax) of goods, whether produced by the establishment or not, plus transfers out of goods to other establishments of the same enterprise, plus bounties and subsidies on

production, plus all other operating revenue from outside the enterprise (such as commission, repair and service revenue, rent, and leasing and hiring revenue), plus capital work done for own use or for rental or lease. Receipts from interest, royalties, dividends and the sale of fixed tangible assets are excluded.

Finance

47. *Total receipts, all funds*: Total council revenue from all sources, including loan receipts, but excluding the operating revenue of business undertakings. Comprises rates, regulatory fees, charges for services supplied, sale of land and other assets, government grants and contributions and donations received.

48. *Total outlays, all funds*: Total council payments excluding the operating expenses of business undertakings. Comprises payments for goods, services and land, debt servicing, donations, levies and advances.

49. *Rates per rateable property*: Total rates accrued, including penalties, per rateable property.

50. *Long term debt*: Refers to debt incurred which is repayable over more than one year. Consists of loans, advances and other long term liabilities actually incurred and recorded as liabilities at the end of the year.

Motor vehicles

51. *Motor vehicles on register*: The motor vehicle census covers all vehicles registered for normal use on public roads which were on the register at 30 September 1991. Vehicles such as tractors (particularly agricultural types), plant and equipment, and motor vehicles used solely on farms, in mines, etc. and not used on public roads are not required to be registered and are excluded from the statistics.

52. *New motor vehicles registered in 1991-92* are based on new processing procedures using the new Vehicle Identification Number (VIN) adopted by motor vehicle registration authorities. The VIN system allows for more accurate classification of vehicles. The statistics include Commonwealth Government owned vehicles except defence service vehicles.

53. Recreation vehicles, such as trail bikes and sand dune buggies intended for use in public places, are regarded as outside the scope of new motor vehicle registrations.

54. The State total may include vehicles registered from interstate and unallocated regions.

Tourist establishments

55. Tourist accommodation establishments currently included in the ABS survey are those providing predominantly short-term accommodation (i.e. for periods of less than two months) to the general public.

56. *Hotels, motels and guesthouses with facilities* include hotels licensed to operate a public bar and motels, private hotels and guesthouses all of which provide a bath (or shower) and toilet in most guest rooms and have breakfast available for guests.

Unpublished statistics

57. The ABS can also make available certain data which are not published. Where it is not practicable to provide the required information by telephone, data can be provided in the following forms: floppy disk, microfiche, photocopy, computer printout and clerically extracted tabulation. A charge may be made for providing unpublished information in these forms.

Related publications

58. Current publications produced by the ABS are listed in the *Catalogue of Publications and Products, Australia* (1101.0). The ABS also issues, on Tuesdays and Fridays, a *Publications Advice* (1105.0) which lists publications to be released in the next few days. The Catalogue and Publications Advice are available from any ABS office.

LIBRARY EXTENSION PROGRAM

The introduction to a user pays pricing policy by the ABS has meant that the community, and students in particular, are making greater use of libraries for their statistical requirements. To meet this growing need the ABS has made its data more widely available to the public by supplying ABS publications to selected libraries free of charge through the Library Extension Program.

A large number of public and tertiary libraries in South Australia are participating in the Library Extension Program. They hold selected Australian and South Australian ABS publications including the major publications Australian Environmental Statistics (4140.0); Social Indicators, Australia, 1992 (4101.0) and The National Health Survey publications (4363.0-4384.0). They also receive publications from the 1991 Census of Population and Housing as they are released.
